

GA4 Audit — billybeck.com

Property: [properties/394194095](#) (www.billybeck.com - GA4) **Account:** [accounts/3768290](#) (www.billybeck.com)
Timezone: America/New_York **Currency:** USD **Generated:** 2026-04-23 **Primary window:** 90 days (2026-01-24 → 2026-04-22) **Data source:** GA4 Data API via [analytics-mcp](#)

1. Executive summary

Metric (last 90d)	Value
Sessions	11,036
Active users	6,863
New users	6,806 (98.9% of active users)
Page views	18,262
Pages / session	1.65
Engagement rate	51.8%
Bounce rate	48.2%
Avg session duration	4:02 (241.9s)
Total events	67,951
Conversions (key events)	0

Three things that matter most:

- Traffic collapsed ~80% in the last 28 days.** Sessions went from 8,327 (Feb 27 – Mar 26) to 1,771 (Mar 27 – Apr 23). This is the headline finding — everything else is secondary.
- Zero configured conversions.** The property has rich engagement events (form_submit: 2,498; file_download: 10,833) but none are marked as **key events**, so every "conversions" cell is 0. Attribution, ROI, and channel comparison are all impossible today.
- A single referrer ([bb3next level.com](#)) drives 25% of all sessions.** When that referral source quiets down, total traffic drops — which is exactly what happened in the 28-day cliff.

2. 28-day trend — sharp decline

Metric	Previous 28d (Feb 27 – Mar 26)	Last 28d (Mar 27 – Apr 23)	Δ
Sessions	8,327	1,771	–78.7%
Active users	5,165	1,001	–80.6%
New users	5,137	752	–85.4%
Page views	13,450	2,870	–78.7%
Engagement rate	54.6%	41.2%	–13.4 pp
Avg session duration	3:53	4:51	+25%

Interpretation. The earlier window contained a 2026-03-15 spike that GSC also registered (455 clicks, 29% CTR day vs ~10/day baseline) and heavy [bb3next level.com](#) referral volume. That promotion/launch event ended. What remains is the steady-state baseline — smaller but slightly more engaged (longer sessions, fewer drive-by hits).

Action. Confirm with the team what happened ~Mar 15. If it was a Tony Robbins UPW event or email blast, this is a seasonal pattern, not a crisis. If it was supposed to sustain, there is a drop to investigate.

3. Channel & source mix

Default channel grouping (90d)

Channel	Sessions	Users	Engagement	Share
Direct	6,649	4,940	51.4%	60.3%
Referral	2,763	1,207	42.2%	25.0%
Organic Search	1,709	1,286	63.1%	15.5%
Organic Social	161	151	52.2%	1.5%
Unassigned	35	35	8.6%	0.3%
Organic Video	11	2	54.5%	0.1%

Top sources (90d)

Source / Medium	Sessions	Engagement
(direct) / (none)	6,649	51.4%
bb3nextlevel.com / referral	2,687	42.1%
google / organic	1,552	63.0%
bing / organic	69	73.9%
m.facebook.com / referral	48	50.0%
ig / social	40	62.5%
facebook.com / referral	32	31.3%
yahoo / organic	32	62.5%
duckduckgo / organic	31	54.8%
(not set) / (not set)	30	0%
dropbox.com / referral	19	47.4%
lm.facebook.com / referral	18	50.0%
ya.ru / referral	17	11.8%
youtube.com / referral	11	54.5%

Observations.

- **Referral concentration risk:** **bb3nextlevel.com** alone = 25% of all sessions. Five Facebook sub-domains (m./lm./l./facebook.com + **ig**) are counted separately — consolidating them in channel grouping would give Facebook ~6% share instead of hiding it.
- **Organic search has the best engagement rate (63%)** — higher than Direct (51%) or Referral (42%). Yet organic is only 15% of traffic. This is the highest-quality, most under-developed channel.
- **(not set) and Unassigned** together are 65 sessions (0.6%) — low enough to ignore, but the 8.6% engagement rate on Unassigned suggests bot or broken-tagging traffic.
- **No Paid Search, no Email, no Display channel shows any traffic.** Either nothing is being spent, or UTM tagging is missing. If there are paid campaigns or email sends, they are being mis-attributed to Direct.

4. Top pages & landing pages

Top pages by views (90d)

Page	Views	Users	Engagement	Avg duration
/30-day-training-challenge-thank-you/	4,151	2,385	66.3%	5:15
/upw/	3,296	2,504	61.4%	1:14
/	1,555	1,138	68.4%	1:29
/UPW/ (duplicate)	1,536	1,109	50.7%	3:02
/coaching/	705	528	86.3%	2:00
/billy-beck-iii/	593	500	94.0%	0:44
/lifeforcethankyou/	544	288	71.6%	4:17
/tony/	411	351	78.5%	1:16
/physical-training/the-gauntlet-burn-fat-fast-workout/	349	224	55.8%	2:08
/testimonials/	251	209	95.2%	1:40
/blog/	206	160	79.9%	0:39
/404.html	184	106	62.2%	1:12

Top landing pages (90d)

Landing	Sessions	Engagement	Bounce
/upw	2,916	62.9%	37.1%
/30-day-training-challenge-thank-you	1,989	49.9%	50.1%
/UPW (duplicate)	1,392	50.9%	49.1%
(not set)	1,066	12.8%	87.2%
/	944	60.2%	39.8%
/tony	357	77.3%	22.7%
/physical-training/the-gauntlet-burn-fat-fast-workout	284	51.8%	48.2%
/lifeforcethankyou	182	37.9%	62.1%
/404.html	121	57.0%	43.0%
/coaching	99	37.4%	62.6%

Issues

- Case-variant duplication.** [/upw/](#) + [/UPW/](#) = 4,832 views; [/tony/](#) + [/Tony/](#) = 492 views. These are the same page being indexed and tracked twice because the server isn't normalizing case. Every case-mixed backlink creates a second GA4 row and splits engagement metrics.
- Thank-you page outranks everything.** [/30-day-training-challenge-thank-you](#) has more views (4,151) than the homepage (1,555) and nearly as many as the main UPW landing. People are bookmarking or sharing the thank-you URL directly. That is surprising — possibly because it's used as a gated content delivery page rather than a true post-conversion page. Worth investigating.

3. **Landing = (not set) with 87.2% bounce.** 1,066 sessions (~9.6% of total) have no landing page recorded. This is almost always a tagging or single-page-session tracking gap. Check whether the GA4 tag is missing on any entry point, and whether **engaged_session** is firing correctly.

4. **/404.html gets 184 views and 121 organic landings.** Someone is pointing at dead URLs. Pair this with GSC's coverage data to hunt the bad backlinks or internal links.

5. Device & geography

Device breakdown (90d)

Device	Sessions	Users	Engagement	Bounce	Avg duration
desktop	5,947	3,240	45.2%	54.8%	4:14
mobile	5,161	3,544	56.6%	43.4%	3:05
tablet	179	85	50.3%	49.7%	18:59

Mobile has **more users** (3,544) than desktop (3,240) but fewer sessions — mobile users come once; desktop users come back. Mobile engagement rate is meaningfully better (56.6% vs 45.2%) with a lower bounce (43.4% vs 54.8%), which means the mobile UX is not the problem despite the lower session count. Tablet's 19-min average is an outlier — likely a handful of long idle sessions skewing the mean over a tiny base of 179 sessions.

Top countries (90d)

Country	Sessions	Users
United States	5,154	3,070
Canada	1,116	597
United Kingdom	755	446
Australia	655	348
Germany	415	243
China	395	395
Netherlands	206	125
Japan	201	152
New Zealand	170	94
Singapore	162	157
France	145	74
Spain	130	83
Mexico	119	61

China anomaly: 395 sessions with 395 users — exactly one session per user. That's a bot signature. Suspect scrapers or headless crawlers; consider a GA4 filter or a country-based internal-traffic exclusion to keep the core dashboards clean.

The site clearly gets global traffic despite being an English-first property. The **/de/**, **/es/**, **/fr/**, **/it/**, **/ja/**, **/nl/**, **/pt/**, **/zh/** translations in the sitemap correspond to real demand (Germany, Netherlands, Japan all in the top 10). Worth instrumenting language-specific conversion tracking.

6. Events — what is firing

Event	Count (90d)
page_view	18,262
session_start	11,359
file_download	10,833
user_engagement	9,456
first_visit	6,806
scroll	6,035
form_submit	2,498
form_start	2,436
click	234
view_search_results	32

Insights.

- **File downloads are the most meaningful business signal on the site** — 10,833 of them in 90 days, roughly one per session. That matches the prominence of **Final-Life-Force-Beg-Plan.pdf** and **Final-Life-Force-Advanced-Plan-Male.pdf** in the GSC page data. Lead magnets are the primary conversion mechanic.
- **Form funnel: 2,436 form_starts → 2,498 form_submits.** The submit count exceeds the start count, which means **form_submit** is firing on forms that never fired **form_start** (probably GA4's automatic form tracking combined with a custom trigger, or a form embed that doesn't emit focus events). Worth reconciling.
- **click event at 234 is suspiciously low.** GA4 Enhanced Measurement's outbound click tracking may be disabled. Given the PDF-heavy, external-link-heavy nature of this site, enabling that should add a lot of signal.
- **No key events marked.** This is the single biggest instrumentation gap. **form_submit** and **file_download** should both be promoted to **key events** in GA4 Admin so they populate the Conversions column.

7. Data-quality & tracking issues

#	Finding	Severity	Fix
1	0 key events configured	HIGH	Mark form_submit and file_download as key events in GA4 Admin → Events → Mark as key event.
2	/upw/ and /UPW/ tracked as separate pages	HIGH	Apply a Modify event rule in GA4 Admin that lowercases page_location , or fix at the server with a 301 from uppercase → lowercase.
3	(not set) landing page = 1,066 sessions	HIGH	Audit pages missing the GA4 tag, especially thank-you redirects, embedded iframes, and any pages served from a CDN or sub-site.
4	bb3nextlevel.com counted as referral (likely same business)	MED	Add bb3nextlevel.com to Unwanted referrals in the data stream settings so cross-domain sessions don't reset.
5	Facebook split across 5 sub-domains	MED	Create a custom channel group that unions *.facebook.com + ig + instagram.com under "Social - Meta".
6	Direct at 60% is implausibly high	MED	Most "Direct" is probably untagged email, SMS, or dark social. Start tagging every outbound link (email CTAs, bb3nextlevel.com outbound, social bio links) with UTMs.
7	China traffic: 395 sessions = 395 users	LOW	Add a country-based filter or just exclude from reporting views.

#	Finding	Severity	Fix
8	<code>form_submit</code> > <code>form_start</code>	LOW	Reconcile form trigger setup — probably one embed not firing <code>form_start</code> .
9	<code>click</code> event = 234 in 90d	LOW	Verify Enhanced Measurement → Outbound clicks is ON for the web stream.
10	Traffic concentrated on one referrer	STRATEGIC	Diversify acquisition (see §8).

8. Prioritized recommendations

This week (tracking hygiene — blocks everything else)

1. Mark `form_submit` and `file_download` as key events. Every report downstream depends on this.
2. Add `bb3nextlevel.com` to unwanted referrals so it stops starting new sessions.
3. Turn on Enhanced Measurement → **Outbound clicks** and **Site search**.
4. Fix the case-variant URL duplication with either a server 301 or a GA4 Modify Event rule lowercasing `page_location`.
5. Find what is causing **1,066 (not set) landing pages** — run a URL crawl and verify the GA4 tag fires on every entry point.

Next 30 days

6. Stand up **UTM discipline** — every email link, every `bb3nextlevel.com` CTA, every social bio link gets tagged. Expect the "Direct" share to drop from 60% → 30-40% as the real channels surface.
7. Define a **conversion funnel** in GA4 Explorations: homepage / landing → `form_start` → `form_submit` → thank-you. You'll see where drop-off is.
8. Investigate why `/30-day-training-challenge-thank-you/` gets 4,151 views. If it's a gated resource, good — measure it. If it's broken (people landing there without converting), fix the redirect.
9. Build a **Looker Studio dashboard** tied to this GA4 property for weekly monitoring — key events, top channels, top landings, 7-day trend. Eliminates ad-hoc querying.

Structural (quarter)

10. **Reduce dependence on `bb3nextlevel.com`**. Even if it's a friendly cross-property, a 25%-share single referrer is fragile. Organic search has the best engagement rate (63%) and is the most logical place to invest — see `reports/gsc-audit.md` for the playbook.
11. **Language-specific conversion tracking**. The site has 8 translations and real traffic from DE, JP, NL, ES, FR. Set up a custom dimension on `language` so the team can see whether non-English traffic converts differently.
12. **Paid search and email are invisible** in the channel report. Either they don't exist or they're being misattributed — decide which and fix the gap.
