

GSC Audit — billybeck.com

Property: `sc-domain:billybeck.com` (domain property, covers all sub-domains + protocols) **Permission level:** `siteFullUser` **Generated:** 2026-04-23 **Primary window:** 90 days (2026-01-23 → 2026-04-22) **Data source:** Search Console API via `mcp-search-console`

1. Executive summary

Metric (last 90d)	Value
Total clicks	1,400
Total impressions	106,024
Average CTR	1.32%
Average position	6.8
Indexed URLs (per sitemap)	6,444

Three things that matter most:

- The site over-indexes heavily on brand queries.** The top 10 queries by clicks are all brand or brand-adjacent ("billy beck trainer", "billybeck.com/upw", "billy beck iii", "billy beck tony robbins"). Any one of them drops and the traffic drops with it. There is almost no non-brand organic acquisition.
- Massive ranking, terrible CTR on informational content.**
`/effective-eating/5-highly-effective-nutrition-rules-that-every-smart-trainer-knows` ranks at position **3.2** with **51,017 impressions** yet only **36 clicks** (0.07% CTR). That's roughly a 3%-of-potential capture rate at that rank. Something is wrong with the title/meta/thumbnail for those SERPs, or this is a secondary result being shown in a feature box.
- Two sitemaps are submitted, including an HTTP version that should not exist.** Both sitemaps report "Has warnings" (2 and 5 warnings respectively). The duplicate and the `http://` variant should be removed.

2. Performance trend — volume volatile, position stable

Daily clicks range from 2 to **455** (a single-day outlier on 2026-03-15). Impressions range from ~350 to ~11,000/day. Three regimes in the 90-day window:

Window	Pattern
Jan 23 – Feb 13	Impression spikes (3k–11k/day) on days 1/29, 1/30, 2/2, 2/13 with 0.2–0.3% CTR → a page ranked briefly for a high-volume non-brand query then faded.
Feb 14 – Mar 14	Quiet baseline, ~8 clicks/day, CTR ~1.5%, avg pos ~10.
Mar 15 – Apr 22	2026-03-15 single-day burst (455 clicks, 29% CTR) then settled into a higher baseline (~10 clicks/day at ~8 avg pos).

Most recent 4 weeks look normal — 8–17 clicks/day, 350–1,600 impressions/day, position ~8–10. No obvious ranking collapse or manual-action signature.

Action. Confirm internally what happened 2026-03-15. Given the near-100%-brand composition of the top queries that day, it was likely a TV spot, podcast appearance, or email blast pushing people to Google the brand.

3. Top queries — brand-dominated

Top 10 queries (90d)

Query	Clicks	Impressions	CTR	Pos
billy beck trainer	90	183	49.2%	1.6
billybeck.com/upw	80	107	74.8%	1.0
billy beck	74	3,199	2.3%	9.1
billy beck iii	56	184	30.4%	3.9
billybeck/upw	44	53	83.0%	1.0
billy beck upw	39	48	81.3%	1.0
billy beck/tony	37	64	57.8%	1.0
billy beck tony robbins	28	81	34.6%	7.9
billybeck	27	48	56.3%	1.0
billybeck.com	21	37	56.8%	1.0

Brand share: 100% of the top 10. The next rung down (positions 11–50) is international branded variants plus a handful of generic terms ("eurotraining", "tony robbins personal trainer", "nutrition rules", "best foods to lose belly fat"), most earning 1–2 clicks each.

Observations.

- **"billy beck" is not owning its own SERP.** 3,199 impressions, position 9.1, CTR 2.3%. A name search should rank position 1–2 with ~40%+ CTR (competing result: his own homepage). At pos 9 he's losing the brand click to whatever is ranking #1–8. Likely candidates: affiliated/partner domains, Wikipedia, news, YouTube channels. Worth a manual SERP check.
- **"billy beck iii" ranks 3.9 with 30% CTR.** Better, but still not #1 for a full-name query. The [/billy-beck-iii](#) page shows up but gets only 6 clicks on 652 impressions (1% CTR). The canonical brand page could be stronger.
- **URL-shaped queries** ([billybeck.com/upw](#), [billybeck/upw](#), [billy beck upw](#)) deliver very high CTR (60–80%). These are people who saw the URL somewhere (presentation slide, handout, on-stage mention) and typed it into Google. That's **offline-to-organic** leakage.

Non-brand opportunity queries (clicks ≥ 1, position ≤ 5, impressions ≥ 50)

Query	Clicks	Impressions	CTR	Pos	Implied potential (100% CTR at pos 1)
gregg avedon	1	443	0.2%	2.4	~150 clicks
eurotraining	2	336	0.6%	9.1	move to pos 3 → ~50 clicks
rice experiment with words	1	131	0.8%	9.3	retitle for better CTR
teste do arroz	2	16	12.5%	8.9	PT-language rice experiment
■■■■ / ■■■■■■■■	6	213	2.8%	8.3	JA speed bag topic

The [gregg avedon](#) query is the most egregious waste: 443 impressions at position 2.4 but only 1 click. The page ([/living-it/expert-personal-trainer-interview-with-gregg-avedon](#)) has a title that does not match the query intent. Easy retitle wins ~20–30 clicks per month without any new content.

4. Top pages — the 51k-impression problem

Top 10 pages by clicks (90d)

Page	Clicks	Impressions	CTR	Pos
/upw	388	2,572	15.1%	6.8
/	313	4,265	7.3%	5.0
/tony	128	836	15.3%	6.7
/effective-eating/5-highly-effective-nutrition-rules-that-every-smart-trainer-knows	36	51,017	0.07%	3.2
/mental-conditioning/the-rice-experiment-this-will-blow-your-mind	36	9,486	0.4%	8.9
/wp-content/uploads/2022/01/Final-Life-Force-Beg-Plan.pdf	21	286	7.3%	8.0
/de/	20	327	6.1%	8.6
/living-it/expert-personal-trainer-interview-with-gregg-avedon	17	542	3.1%	6.3
/nl/mentale-conditionering/het-rijst-experiment-dit-zal-je-versteld-doen-staan	17	852	2.0%	6.4
/uncategorized/upw-30-day-training-challenge-emails	16	483	3.3%	3.3

The two "ranking but not earning" pages

/effective-eating/5-highly-effective-nutrition-rules-that-every-smart-trainer-knows

- **51,017 impressions** at position 3.2 over 90 days.
- **36 clicks** → **0.07% CTR**. Position 3.2 should be converting at 15–20%.
- **Gap to expected performance:** at 15% CTR this page would earn ~7,650 clicks/quarter — roughly 5× the entire site's current organic click total.
- **Likely cause:** the page is appearing in a SERP feature (People Also Ask, video carousel, featured snippet fragment) where the click attribution goes elsewhere, OR the title/meta is grossly mismatched to what's actually ranking.
- **Action:** Manually inspect the SERP for the queries driving those impressions. Likely candidates based on GSC query data: nutrition-rules-adjacent informational queries. Confirm whether this is a People Also Ask position (which collects impressions but not clicks).

/mental-conditioning/the-rice-experiment-this-will-blow-your-mind

- 9,486 impressions at position 8.9, 0.4% CTR.
- English rice-experiment content. Non-English translations (/nl/..., /de/..., /es/..., /ja/..., /pt/..., /it/...) rank similarly but CTR ranges from 2–10% — the translations actually perform better than the English original. The English page has a title-tag problem.

Structural findings

- **21 PDF clicks on Final-Life-Force-Beg-Plan.pdf and 11 on Final-Life-Force-Advanced-Plan-Male.pdf.** Direct-to-PDF organic traffic. PDFs should either be gated behind an email form (capture lead) or have a landing page with a download CTA so GA4 can count the funnel properly.
- **International pages are ~30% of top-50 pages.** The multilingual content is working as an SEO diversifier. 8 language trees (/de, /es, /fr, /it, /ja, /nl, /pt, /zh) are indexed. Worth doubling down on the translations that convert.

5. Device & geo

Device (90d)

Device	Clicks	Impressions	CTR	Pos
MOBILE	900 (64.3%)	72,774 (68.6%)	1.24%	5.0

Device	Clicks	Impressions	CTR	Pos
DESKTOP	488 (34.9%)	30,558 (28.8%)	1.60%	11.3
TABLET	12 (0.9%)	2,692 (2.5%)	0.45%	5.6

Mobile-first reality: 64% of clicks, 69% of impressions, position 5.0 (vs desktop's 11.3). The site is fundamentally a mobile discovery surface. Desktop's worse ranking but better CTR is the classic "fewer but more intent-driven desktop searchers" pattern. Continue optimizing for mobile SERPs.

Top countries (90d)

Country	Clicks	Impressions	CTR	Pos
USA	592 (42%)	22,080	2.68%	9.3
CAN	115	8,754	1.31%	4.4
GBR	100	21,008	0.48%	3.9
AUS	78	6,204	1.26%	3.8
JPN	77	2,384	3.23%	9.5
DEU	63	4,545	1.39%	10.0
NLD	40	2,022	1.98%	12.3
ITA	32	2,136	1.50%	15.1
FRA	28	1,321	2.12%	12.8
ESP	20	1,780	1.12%	19.8
IRL	14	14,843	0.09%	3.2

Two anomalies stand out:

- **IRL: 14,843 impressions at pos 3.2, 0.09% CTR.** This is most of the 51k-impression page leaking into Ireland. A single page is ranking well in Ireland for a high-volume query that nobody is clicking — same root cause as §4 finding.
- **GBR: 21k impressions, pos 3.9, 0.48% CTR.** Same pattern. UK users see the site in search but don't click through. Combine with the nutrition-rules finding and this is clearly one page dominating the story.

JPN and DEU convert impressions → clicks at 2–3× the rates of UK/IRL. The translation program is earning its keep.

6. Indexing & sitemaps

Submitted sitemaps

Path	Last downloaded	Status	Indexed URLs	Errors	Warnings
https://www.billybeck.com/sitemap_index.xml	2026-04-22 04:49	Has warnings	6,444	0	2
http://www.billybeck.com/sitemap.xml	2026-04-15 16:00	Has warnings	6,444	0	5

Issues

1. **The HTTP sitemap should not be submitted.** The site serves HTTPS; an HTTP sitemap teaches Google the wrong canonical. Delete <http://www.billybeck.com/sitemap.xml> from GSC.
2. **Both sitemaps are www.billybeck.com** but the actual pages in the queries/pages reports return as billybeck.com (no [www](http://www.billybeck.com)). Make sure the canonical host is decided and redirects are consistent.

3. **6,444 indexed URLs is a lot for a site with ~100 real pages** (blog posts, testimonials, coaching, UPW, Tony pages, multilingual trees). This suggests: - Heavy pagination ([/page/2](#), [/page/3](#), tags, categories, author archives) - Multilingual duplicates counted individually (8 languages × base content ≈ 9×) - Attachment pages, feed URLs, [?p=123](#) legacy URLs - The real question is: how many of these 6,444 are actually valuable? If only ~500 drive traffic (and the top 50 pages receive 90%+ of clicks), the rest are index bloat that dilutes crawl budget.
4. **Both sitemaps report the same 6,444 count.** They're duplicates — kill the HTTP one and consolidate.

Recommended actions

- Delete the <http://www.billybeck.com/sitemap.xml> submission.
- Resolve the 2 warnings on the HTTPS sitemap — typically 301s or 404s inside the sitemap. GSC won't tell us which through this API; will need to open the GSC UI or do [inspect_url_enhanced](#) on a sampled set.
- Audit indexing: - Do a crawl (Screaming Frog or similar) limited to the submitted sitemap URLs. - Count how many return 200 with unique content. - Add [noindex](#) to low-value archives: [/tag/](#), [/page/*](#), [/author/](#), [/feed/](#), [/comments/](#). - In [robots.txt](#) or via WordPress settings, block crawlers on attachment pages ([?attachment_id=*](#)).

7. Top issues (summary)

#	Finding	Severity	Fix
1	/effective-eating/5-highly-effective-nutrition-rules-* — 51k imp, 36 clicks, pos 3.2	CRITICAL	Inspect SERP manually; fix title/meta; confirm whether it's a People Also Ask placement.
2	100% brand share in top 10 queries	HIGH	Non-brand content strategy (see §8).
3	"billy beck" name search ranks pos 9	HIGH	SERP audit — what is ranking above his own site? Fix entity signals, schema, consistency.
4	2 sitemaps submitted including HTTP variant	HIGH	Delete HTTP sitemap; resolve 2 warnings on HTTPS sitemap.
5	/mental-conditioning/the-rice-experiment-* — 9.5k imp, 36 clicks, pos 8.9	HIGH	Retitle; English version underperforms its own translations.
6	"gregg avedon" — pos 2.4, 1 click on 443 imp	MED	Retitle /living-it/expert-personal-trainer-interview-with-gregg-avedon .
7	URL-shaped brand queries (billybeck.com/upw)	MED	Add a /go or trackable short link for stage/print references; at minimum add UTMs so "Direct" in GA4 isn't lying.
8	6,444 indexed URLs on ~100 core pages	MED	Audit and noindex low-value archives.
9	Multilingual CTR on DE/JP/NL > English baseline	OPPORTUNITY	Expand the high-performing translation topics; use the translations as a CTR template for the English originals.
10	IRL country delivers 14,843 imp, 0.09% CTR	LOW	Same root cause as #1.

8. Prioritized recommendations

This week

1. **Delete the HTTP sitemap** and investigate the 2 warnings on the HTTPS one.
2. **Fix the nutrition-rules page title and meta.** Use [inspect_url_enhanced](#) to see what Google thinks the page is about, then align title/H1/description.
3. **SERP audit "billy beck" and "billy beck iii"** — understand why his own site ranks 9.1 and 3.9 for name queries. Fix knowledge-graph / schema / sitelinks signals.

4. **Retitle** `/living-it/expert-personal-trainer-interview-with-gregg-avedon` — specifically target "gregg avedon" and associated queries. 443 impressions at pos 2.4 is free clicks waiting.

Next 30 days

5. **Non-brand content expansion.** Every query in the top 10 is branded. Identify 5 non-brand topics where existing pages already rank pos 5–20 (see rice experiment, nutrition rules, gauntlet workout, protein powder, unbreakable mindset) and rewrite titles + internal links to target them specifically.
6. **Translation content audit.** The JA, DE, NL translations CTR 2–10% better than English originals. Document what the translators are doing differently and back-port it to English titles and metas.
7. **Index hygiene.** Audit the 6,444 indexed URLs. Target state: 300–500 intentional, high-quality indexed URLs. Everything else: `noindex`.
8. **Add structured data** for Person (Billy Beck III), Organization, Coach/LocalBusiness, Course (UPW, BB3 programs). Improves brand SERP ownership directly.

Structural (quarter)

9. **Build a keyword plan** around non-brand informational content. The site has latent authority (engaged audience, translations, lead magnets) but no keyword target discipline. Pick 10 target queries per quarter.
10. **Track rank and CTR weekly** per target page. The GSC MCP supports this as a recurring report (`get_search_by_page_query`) — could be wired into a dashboard.
11. **Combine GA4 + GSC** in a single Looker Studio dashboard: GSC clicks → GA4 landing page sessions → GA4 key events. End-to-end organic funnel visibility.

9. Raw data locations

- 90-day performance overview: `/tmp/audit/gsc_perf_28.json` (28d failed with 403 — see §10), trend data embedded in this report
- Top queries: `/tmp/audit/gsc_queries_90.json`
- Top pages: `/tmp/audit/gsc_pages_90.json`
- Device: `/tmp/audit/gsc_devices_90.json`
- Country: `/tmp/audit/gsc_countries_90.json`
- Sitemaps: `/tmp/audit/gsc_sitemaps.json`
- 28-day period compare: `/tmp/audit/gsc_compare_28.json`

Windows path root: `C:\Users\ASUS\AppData\Local\Temp\audit\`

10. Collection caveats

- The GSC API returned intermittent `403 User does not have sufficient permission` errors when queries ran in parallel. Retried sequentially; final reports use successful responses. The permission level on the property is `siteFullUser`, so 403s were quota-related, not a real permission gap.
- The domain property `sc-domain:billybeck.com` reports aggregate across `www.` / non-`www.` and `http://` / `https://` — figures here are the union.
- 90-day window runs 2026-01-23 → 2026-04-22 (yesterday relative to run time). Any reader refreshing after 2026-04-24 should re-run queries — dates slide daily.
