

Site Audit & Growth Plan

billybeck.com — Personal Training, Nutrition & Mental Conditioning

Overall Scorecard

Based on a technical crawl of the homepage and accessible inner pages (About, Blog, Testimonials, Coaching, Videos) plus a review of the visible HTML, metadata, and content architecture.

Technical SEO		4/10	crawlability OK but many fixable issues
On-Page SEO		5/10	decent titles, weak headings & schema
Content Depth		6/10	great proof, thin service pages
Design & UX		6/10	looks dated, CTA unclear
Performance		4/10	heavy theme, unoptimized media
Local SEO		3/10	no address, no LocalBusiness schema
Accessibility		4/10	alt-text, contrast, forms need work
Reach / Growth Systems		4/10	no lead magnet, weak funnel

Composite Score

36 / 80 — roughly 45% — "working but leaking growth"

Top 5 highest-impact fixes (do these first)

- Fix the **double-slash image URLs** (*//wp-content/*) and the **www vs non-www mismatch** — these cause unnecessary redirects and broken images on some devices.
- Add a proper **LocalBusiness + Person schema** (Billy Beck, Pembroke Pines FL, phone, hours). Right now the site is invisible for "personal trainer Pembroke Pines" / "South Florida celebrity trainer" queries.
- Replace the generic H1 **"LIVE LIKE A LION"** with a keyword-rich headline like *"Elite Personal Training, Nutrition & Mental Conditioning — by 2× World's Best Trainer Billy Beck III"*.
- Add a **primary CTA** (Apply / Book Consultation) that sticks in the header on mobile. The phone number alone is not enough.
- Ship a **lead magnet** (the existing "7 Essential Factors" PDF already shown on the hero) with a real email capture + follow-up sequence. Today it links but has no funnel.

1. Executive Summary

Billy Beck III is a powerhouse personal brand — 2× World's Best Personal Trainer, Fitness Hall of Fame inductee, trainer to Tony Robbins. The **authority** and **social proof** are world-class. The **website**, however, is not keeping up. It is built on a dated WordPress theme (theme files carry 2017 dates), ships a lot of unused assets, and misses most of the modern on-page and schema signals that Google now uses to rank expertise-led personal brands.

The opportunity is large and easy to capture: you already have the E-E-A-T signals (Experience, Expertise, Authority, Trust) that most competitors spend years trying to fake. A clean-up of the technical foundation, a sharper CTA/funnel, and a modest content cadence would likely **2–4×** qualified enquiries within two quarters.

What the site already does well

- Unmatched **social proof**: Tony Robbins, NFL (Kim Herring), Sylvia Ferrero, 18+ before/after pairs, press logos (Men's Health, GQ, NBC, ABC, Fox, CBS).
- Clear **brand voice** — “Live Like A Lion” is memorable and consistent across pages.
- A working **blog**, **video hub**, and a book (*Lean & Mean*) already provide content infrastructure.
- Facebook Pixel is installed, so paid retargeting is possible.
- Secondary landing pages exist for specific campaigns (*/tony*, */upw*) — good instinct.

Where the site is leaking growth

- No clear **primary call-to-action** above the fold beyond a phone number.
- **Local SEO signals** are effectively absent (no NAP block, no LocalBusiness schema, no embedded map, no location pages).
- **Structured data** (Person, Book, Review, Article, VideoObject) is missing — you are handing rich-result real estate to competitors.
- Image delivery is **doubled** (SVG placeholder + raw JPG) and contains broken // paths. Real-device LCP is hurting.
- Translated pages (zh, nl, fr, de, it, ja, pt, es) risk **duplicate content** without proper hreflang + canonical pairs.
- No visible **email capture** funnel — leads that land hot have nowhere to go except a phone call or a book purchase on Amazon.

2. Technical SEO Audit

Crawlability is fine — the site is indexed and search engines can read it. But a number of technical foot-guns are quietly eroding rankings and trust. None of these are hard fixes.

Mixed domain: *billybeck.com* vs *www.billybeck.com*

HIGH

What we found	The canonical domain is <i>billybeck.com</i> (no <i>www</i>), but most image and asset URLs are hard-coded to <i>www.billybeck.com</i> , e.g. <i>https://www.billybeck.com/wp-content/...</i>
Why it matters	Every asset hits an extra redirect (<i>www</i> → <i>apex</i> or vice versa), wasting crawl budget and slowing first paint. Search engines also see two hosts and may split link equity.
How to fix	Set one canonical host in WordPress <i>General > Site Address</i> , add a 301 redirect from <i>www</i> to <i>apex</i> (or the reverse — pick one), and run a search-replace in the database to normalize asset URLs.

Double-slash in asset paths (*//wp-content/*)

HIGH

What we found	Many image URLs render as <i>https://www.billybeck.com//wp-content/themes/...</i> — note the double slash after the hostname.
Why it matters	Most browsers forgive this, but some CDNs, caches, and crawlers do not. It also creates duplicate cache entries and inflates Largest Contentful Paint (LCP).
How to fix	Fix the theme / database: the Site URL field almost certainly has a trailing slash. Remove it, then do a WP-CLI search-replace across <i>wp_posts</i> , <i>wp_options</i> , and <i>wp_postmeta</i> .

Duplicated image markup (SVG placeholder + real image)

MEDIUM

What we found	Every image on the homepage renders twice in the DOM — once as a <i>data:image/svg+xml</i> placeholder, then again as the real JPEG/PNG.
Why it matters	This is caused by a lazy-load plugin that kept the fallback inline. Result: 2× the DOM nodes, extra layout shifts (CLS), and slightly worse accessibility since screen readers see the blank SVG first.
How to fix	Move to modern native lazy-loading (<i>loading="lazy"</i>) and remove the placeholder plugin, or configure it to drop the inline placeholder once real images load.

robots.txt & sitemap.xml not referenced

MEDIUM

What we found	No visible <i><link rel="sitemap"></i> in the HTML head, and the footer does not advertise the sitemap. We could not confirm that <i>robots.txt</i> points to a sitemap.
Why it matters	Googlebot discovers sitemaps via <i>robots.txt</i> Sitemap: directive; without it, new/updated posts are crawled more slowly.
How to fix	Install or activate Rank Math / Yoast, auto-generate an XML sitemap, and add <i>Sitemap:</i> <i>https://billybeck.com/sitemap_index.xml</i> to <i>robots.txt</i> . Submit in Google Search Console and Bing Webmaster.

No structured data (schema.org) detected

HIGH

What we found	Homepage and inner pages serve no JSON-LD. A personal-trainer site of this authority should publish Person, LocalBusiness, Book, Article, VideoObject, and Review schemas.
Why it matters	Structured data powers rich results: star ratings, FAQ accordions, video thumbnails in SERPs, Knowledge Panel eligibility. Without it, Google has to guess who/what this site is about.
How to fix	Add JSON-LD via Rank Math or a tiny custom snippet in <i>header.php</i> . Minimum viable set: Person (Billy), LocalBusiness (the gym/studio address + phone), Book (Lean & Mean with reviews), VideoObject (for each YouTube embed), BreadcrumbList.

No hreflang for 8 translated versions

MEDIUM

What we found	TranslatePress is serving /zh/, /nl/, /fr/, /de/, /it/, /ja/, /pt/, /es/ — but we see no <code><link rel="alternate" hreflang="..."></code> tags confirmed in the HTML.
Why it matters	Without hreflang, Google can serve the wrong language in the wrong country and may flag translated pages as duplicate content , diluting rankings.
How to fix	Enable hreflang output in TranslatePress (Settings > SEO Pack), verify each page self-references + points to all language siblings, and add <i>x-default</i> for English.

Missing modern image formats (WebP / AVIF)

MEDIUM

What we found	Homepage images (logos, before/after, book cover) are served as JPEG / PNG at full original dimensions.
Why it matters	WebP is typically 25–35% smaller; AVIF is 40–50% smaller. This directly affects LCP, which is now a Core Web Vital.
How to fix	Install ShortPixel / Imagify / Cloudflare Polish. Enable automatic WebP serving and responsive <i>srcset</i> . Keep originals ≤ 200 KB.

Header uses text “Select Page” as a menu trigger

LOW

What we found	On certain viewports, the navigation shows the string “Select Page” — this is Divi/theme default placeholder text.
Why it matters	Looks unprofessional and harms brand perception. Also confuses some assistive tech users.
How to fix	Either customize the label to “Menu” in the theme options, or replace the theme’s mobile menu with a proper hamburger icon.

3. On-Page SEO & Metadata

Page	Title Tag	Meta Description	H1	Issue
Home (/)	Billy Beck III — Personal Training, Nutrition, Supplements and Mental Conditioning	<i>Not visible / generic</i>	LIVE LIKE A LION	H1 is brand-slogan only, not keyword-aligned.
/billy-beck-iii	Billy Beck III - 2x World's Best Personal Trainer	2x World's Best Personal Trainer. Fat burning strategies ... Live Like A Lion.	Meet Billy Beck III	Good title, description is slightly keyword-stuffed.
/coaching	Personal Training and Coaching Programs	Generic testimonial excerpt used as description.	Unknown (rate-limited)	Description should describe the offer, not quote a client.
/testimonials	Testimonials Archive - Billy Beck	<i>Not set / template default</i>	Testimonials	Archive-style title; no Review schema attached.
/blog	Blog - Billy Beck	<i>Not set / excerpt-based</i>	Blog	Blog index has no curated intro copy.

Recommendations

- **Homepage title:** shorten and front-load the money keyword. Recommended: *Elite Personal Trainer & Nutrition Coach | Billy Beck III — South Florida* (≤ 60 chars).
- **Homepage meta description:** write one. 150–160 chars, include “2× World’s Best Trainer,” “Pembroke Pines / South Florida,” and a direct CTA (“Apply to train”).
- **H1 on every page:** one per page, keyword-aligned. The home H1 should contain “personal trainer” or “coach” — “Live Like A Lion” can live on as an H2 or tagline.
- **H2/H3 hierarchy:** right now sections on the home are all H2 with no H3 subsections. Break up testimonials, videos, articles, and results with proper H2→H3 nesting.
- **Open Graph & Twitter Cards:** confirm and set *og:title*, *og:description*, *og:image*, *twitter:card=summary_large_image*. When Tony Robbins or a client shares your URL, Facebook/X should show a polished preview, not a blank thumbnail.
- **Canonical tags:** ensure every page has exactly one self-referential *rel="canonical"*. Translated pages should canonical to themselves, not English.
- **Internal linking:** the home links to *Blog* and *Videos*, but the about page doesn’t link to *Coaching* and vice versa. Add contextual links so authority flows from */billy-beck-iii* → */coaching* → */contact*.

4. Content & Information Architecture

Current structure (observed)

Section	Status	Observation
Home	Active	Strong social proof, weak CTA, no service explanation.
About (/billy-beck-iii)	Active	Well-written bio. Missing credentials schema + photo alt text.
Coaching	Active	Offer page exists but unclear pricing / tiers / outcomes.
Testimonials	Active	Deep testimonial archive. No Review schema, no video testimonials embedded.
Blog	Intermittent	Older posts from 2017–2021, a few recent; no content calendar visible.
Videos	Thin	Useful BB3 TV hub, but each page is just a YouTube embed + 1 paragraph.
Supplements	Thin	Only one article surfaced. Missed affiliate revenue opportunity.
/tony, /upw	Active	Campaign landing pages — good instinct, reuse pattern for other launches.
Contact	Active	Likely a standard form; we could not confirm spam protection, schema, or address.

Content gaps (and the SEO traffic they'd unlock)

- **Service pages with pricing/tiers** (1-on-1 Elite, Online Coaching, Corporate / Executive). Each should target its own keyword cluster.
- **City / location page** (“Personal Trainer in Pembroke Pines”) — today you don’t show up for local searches (see Section 7).
- **Pillar articles** on your signature topics: fat loss over 40, body recomposition for executives, training around chronic pain (Tony Robbins angle), nutrition protocols. Aim for 2,000+ words, with schema.
- **FAQ page** (*How much does personal training with Billy cost? Do you train remotely? What’s the time commitment?*) — FAQ schema earns you SERP accordions.
- **Case-study pages** rather than just quote-card testimonials. One page per client with before/after, timeline, protocol summary. Long-tail gold.
- **“Featured In” page** with working links to the Men’s Health / GQ / Men’s Journal articles — these backlinks (or at least evidence of them) power E-E-A-T.
- **Supplements hub** — if you already recommend products, turn this into a proper /supplements landing page with your stack and affiliate links. This is real recurring revenue.
- **Podcast / interview archive** if Billy has appeared on shows — each becomes an indexable page with rich content and backlinks.

5. Design & User Experience

Design observations

- **Visual era:** the theme assets (logos, button PNGs, layout) were last touched around 2017. Typography and spacing feel pre-Core-Web-Vitals era.
- **Hero:** a background video, the “LIVE LIKE A LION” lockup, an iPad mock-up, and a PDF cover all compete for attention. There is no single clear “do this next” button.
- **Press logo bar** is strong. Keep it — just lazy-load.
- **Testimonial cards** are readable but use old-style portrait cutouts that look dated. Modern approach: monochrome/duotone headshots on a solid card with a bold pull-quote.
- **Before/After grid** (18 pairs) is powerful proof but loads as 36 individual images. Cluster them into a lightbox gallery with one thumbnail per client.
- **Footer** is sparse: just a logo, copyright, “Back to Top,” and the agency credit. Missing: site map links, address/phone, social icons, legal pages, email capture.
- **Language switcher modal** opens automatically (TranslatePress default) and covers hero content on first visit. Disable auto-popup; keep it as a passive option in the footer.

UX / conversion issues

No primary CTA above the fold

HIGH

What we found	The only call-to-action visible on first load is a phone number in the top bar. The homepage has no “Apply to Train,” “Book Consultation,” or “Start Here” button.
Why it matters	Fitness visitors are in high-intent research mode. If they can’t act in one click, they bounce to a competitor. Phone-only funnels also exclude international visitors and users who prefer not to call.
How to fix	Add a persistent CTA button in the header (“Apply to Train”), a hero CTA, and a sticky mobile bar (“Call” + “Book”). Send all of them to a single application form — not a generic contact form.

Mobile menu uses theme default “Select Page”

MEDIUM

What we found	On narrow viewports the nav collapses into a placeholder labeled “Select Page.”
Why it matters	Unprofessional for a premium, celebrity-tier brand; also worse for accessibility.
How to fix	Customize the theme’s mobile nav label and swap for a proper hamburger icon. Consider a bottom nav bar on mobile for the top 3 actions.

Form friction & trust signals unverified

MEDIUM

What we found	Contact page is the single funnel for new clients, but spam protection, expected response time, and privacy note are not confirmed to be in place.
Why it matters	High-intent leads abandon forms that ask for too much up front or that don’t say “we reply within 24h.”
How to fix	Use a 3-field application (Name, Email, Goal), add reCAPTCHA v3 or hCaptcha, show response-time guarantee + privacy link, and auto-trigger a welcome email with a calendar link to book a discovery call.

6. Performance & Core Web Vitals

We could not run a full PageSpeed Insights synthetic test in this environment, but a review of the markup reveals clear performance debt. These observations let us estimate what Lighthouse would flag.

Likely Core Web Vital profile

Metric	Estimated	Target (Good)	Root cause
LCP	3.5–5.0s	≤ 2.5s	Hero video + unoptimized JPEGs + duplicate image markup.
INP	200–400ms	≤ 200ms	WordPress + multiple plugins (TranslatePress, FB Pixel, theme JS).
CLS	0.15–0.30	≤ 0.10	SVG placeholders swapping to real images shifts layout.
TTFB	500–900ms	≤ 600ms	Shared WordPress hosting + no full-page cache confirmed.

Concrete performance wins

- **Replace hero background video** with a 10-sec looped, muted MP4 compressed < 1 MB (or a static hero with a click-to-play video). Today the video is the LCP element.
- **Compress & convert images** to WebP/AVIF. Aim for 100–200 KB per hero image, 40–80 KB per thumbnail.
- **Enable page caching** + object cache (Redis) on the server. WP Rocket or LiteSpeed Cache on LiteSpeed hosting works well for this theme.
- **Put Cloudflare in front** (free tier is fine) for global CDN, HTTP/3, automatic WebP, Brotli.
- **Defer non-critical JS**: Facebook Pixel, TranslatePress auto-detect, any chat widgets. Load them on interaction or after 2–3 seconds.
- **Prune unused plugins**: audit the active plugin list. A site this size should run on 8–12 plugins max.
- **Upgrade PHP** to 8.2+ if not already. Typical 15–25% server-side speed boost on WordPress.
- **Set explicit width/height** on every so the browser reserves space and CLS drops.

7. Local SEO (South Florida)

The site phone number (954-424-8584) is a Broward County / South Florida area code, suggesting the practice is based in or near Pembroke Pines. Yet the site exposes none of the local signals Google uses to surface local businesses. Competitors (FitnessTrainer, Thumbtack, Crunch, Freakin Fitness, Planet Fitness, Exercise Coach) dominate these SERPs today.

Missing local signals

- No visible **NAP block** (Name, Address, Phone) in the footer.
- No **LocalBusiness** (or *SportsActivityLocation* / *HealthClub*) JSON-LD.
- No **embedded Google Map** on the home or contact page.
- No **location landing pages** (*/personal-trainer-pembroke-pines*, */personal-trainer-fort-lauderdale*, */personal-trainer-miami*).
- No visible **Google Business Profile** link (reviews, photos, hours).

Local SEO action plan

- **Claim / optimise Google Business Profile.** Category: Personal Trainer. Add all service categories, hours, interior photos, before/after photos (with consent), and ask 5–10 existing clients to leave Google reviews this month.
- **Add NAP** to the footer on every page: same format everywhere (exact match with GBP).
- **Publish one city landing page** per metro you actively serve. Keep it unique — include local client stories, local gym partnerships, driving directions.
- **Build citations** on Yelp, YellowPages, HealthGrades (if applicable), Thumbtack, BetterBusinessBureau, Alignable, LinkedIn. Consistent NAP everywhere.
- **Local backlinks:** South Florida Chamber of Commerce, local podcasts, Miami/Fort Lauderdale business journals, local charity events.

8. Accessibility (WCAG 2.2)

Accessibility matters for three reasons: it's the right thing to do, it's legally required for US commercial sites under ADA/Title III, and Google uses a11y signals as ranking & E-E-A-T inputs.

- **Alt text:** many images use the subject's name as alt ("Tony Robbins") — fine for identification, but decorative and logo images should have `alt=""`, not repeat the brand. Before/after images should describe the transformation.
- **Headings:** duplicate H2s without H1 context on some pages (see Section 3). A screen reader navigating by headings gets lost.
- **Color contrast:** gold-on-cream copy (branding color) does not meet 4.5:1 in some sections — verify with WebAIM checker.
- **Keyboard navigation:** the custom mobile nav and language modal need a visible focus ring and ESC-to-close.
- **Form labels:** contact form fields should have programmatic `<label for=...>`, not placeholder-only labels.
- **Video:** the hero background video should be `aria-hidden="true"` + muted + not carry meaning. Any real content video (BB3 TV) needs captions / transcripts.
- **Language attribute:** confirm each translated page sets `<html lang="xx">` correctly — not "en" for all.

Quick wins

- Install a free a11y scanner (axe DevTools, WAVE) and fix the top 20 findings.
- Add a "Skip to main content" link at the top of every page.
- Ensure all interactive elements (buttons, links) have 44×44 px minimum tap targets on mobile.

9. International / Multi-language

You serve 8 languages (English, Simplified Chinese, Dutch, French, German, Italian, Japanese, Portuguese-BR, Spanish). That's a big commitment — and it's either a major asset or a duplicate-content liability depending on implementation.

- **Audit translation quality:** TranslatePress defaults to machine translation unless overridden. For a luxury brand, auto-translated copy can undermine credibility. Either (a) have a human review each language, or (b) disable languages you can't maintain.
- **Confirm hreflang** on every page pair (see Section 2).
- **Disable the auto-popup language switcher** — it blocks the hero on first paint and annoys returning users whose language was already correct.
- **Translate metadata too:** many multi-language setups translate body but leave English *<title>* and *meta description*. Check each locale in Search Console.
- **Consider pruning** to the 2–3 languages where Billy actually gets clients (likely English, Spanish, Portuguese given South Florida). 8 languages at today's quality is worse than 3 done well.

10. Reach, Growth & Conversion Systems

SEO gets you discovered. These systems turn discovery into revenue.

10.1 Email capture & lead magnet

- The hero already promotes “The 7 Essential Factors to Transform Your Body.” Turn it into a real opt-in: email field, delivered as PDF, followed by a 5–7 email nurture sequence.
- Add an exit-intent popup (non-intrusive) with the same lead magnet.
- Put a capture widget at the bottom of every blog post and every video page.
- Send a weekly newsletter (“Monday Lion Mail”) — consistency builds the list and deepens the brand.

10.2 Content marketing cadence

- 1 pillar article / month (2,000+ words, evergreen, linked to a service page).
- 2–4 short blog posts / month (< 800 words, tied to news or client wins).
- 1 YouTube short / Reel / TikTok per week, repurposed from existing BB3 TV footage.
- 1 long-form podcast or interview per quarter (guest appearances drive backlinks).

10.3 Social proof & PR amplification

- **Case studies:** turn the top 6 before/after pairs into full-page case studies with video testimonials, protocols, and a CTA at the end.
- **Press page:** collect direct links to the Men’s Health, GQ, Business Insider, Rolling Stone features. Embed the logos as clickable outbound + inbound evidence.
- **Podcast tour:** 1 podcast appearance per month in the entrepreneurship, peak-performance, and men’s health niches. Each gives a do-follow backlink + referral traffic.
- **Guest articles:** pitch Muscle & Fitness, Bodybuilding.com, Men’s Journal (you’ve already been featured — easier to re-pitch than to cold-pitch).

10.4 Paid & retargeting

- Facebook Pixel is installed but we didn’t see a GA4 tag or Google Ads conversion tag. Add both.
- Run a **brand-defense** Google Ads campaign on “Billy Beck” (cheap, protects the SERP from impostors).
- Retarget site visitors with a \$5/day Meta campaign promoting the lead magnet — not the 1-on-1 package. Warm them up first.
- If budget allows, test YouTube pre-roll on the top 10 Tony Robbins / peak-performance videos — highly relevant audience.

10.5 Analytics & measurement

- Install GA4 + Google Tag Manager.
- Configure key events: form_submit, phone_click, scroll_50, video_play, newsletter_signup.
- Connect GA4 ↔ Search Console for keyword × conversion reporting.
- Set up a simple dashboard (Looker Studio) to review weekly.

11. Competitive / Keyword Opportunity

A short, non-exhaustive keyword map to guide new content. Volumes are directional — verify in Ahrefs / SEMrush / Keywords Everywhere before committing.

Cluster	Sample Keywords	Intent	Target Page
Brand	billy beck, billy beck iii, billy beck trainer, billy beck tony robbins	Navigational	Home + /billy-beck-iii
Local	personal trainer pembroke pines, celebrity trainer south florida, elite trainer fort lauderdale	Commercial	New location landing pages
Service	online personal training, executive fitness coach, 1-on-1 fat loss coach	Commercial	Dedicated service pages
Topical / TOFU	how to lose body fat over 40, training around chronic pain, high performer nutrition	Informational	Blog pillar posts
Book / product	lean and mean billy beck, fat burning secrets world's best trainer	Transactional	Book landing page + Amazon link
Authority piggyback	tony robbins trainer, the rock's trainer, fitness hall of fame trainer	Informational	PR / case-study posts

Backlink / authority plays

- Reach out to every publication that has ever featured Billy and request they update the article with a link to *billybeck.com* (many legacy articles only mention his name, no link).
- HARO / Qwoted / Help a B2B Writer: answer 2–3 fitness / executive wellness queries per week. Each landed quote = 1 authority backlink.
- Guest posts on complementary sites: men's lifestyle, executive coaching, peak-performance blogs.
- Partnership exchanges with nutrition brands you already recommend (protein powder, supplements) — your supplement page becomes a two-way referral engine.

12. Prioritized 90-Day Action Plan

Organized by impact vs effort. Items in green = “do this week.”

Week 1–2 — Foundation (Quick Wins)

Action	Impact	Effort
Fix www vs apex domain; enforce one canonical host	High	Low
Run WP-CLI search-replace to remove //wp-content// double-slash URLs	High	Low
Write real meta titles + descriptions for the 8 top pages	High	Low
Add GA4 + GTM + Search Console + Bing Webmaster	High	Low
Generate & submit XML sitemap; link from robots.txt	High	Low
Disable auto-popup language switcher	Medium	Low
Add a real primary CTA button in the header (“Apply to Train”)	High	Low
Claim / optimize Google Business Profile; request 10 reviews	High	Low

Week 3–6 — Rebuild (Medium Effort, Big Payoff)

Action	Impact	Effort
Add JSON-LD schema: Person, LocalBusiness, Book, VideoObject, Review	High	Medium
Compress & convert all images to WebP; set width/height	High	Medium
Install caching + Cloudflare in front of the site	High	Medium
Rebuild homepage H1 + hero CTA; add sticky mobile CTA bar	High	Medium
Launch lead magnet funnel (7 Essential Factors) + welcome email sequence	High	Medium
Create /coaching page with clear tiers + pricing logic	High	Medium
Publish 1 pillar article (“Training Over 40” or similar)	High	Medium
Add hreflang + translate metadata across all 8 languages (or prune)	Medium	Medium

Week 7–12 — Scale (Long-term Growth)

Action	Impact	Effort
Launch 3 city landing pages (Pembroke Pines, Fort Lauderdale, Miami)	High	High
Convert top 6 testimonials into full case-study pages	High	High
Build press / “Featured In” page with real outbound links	Medium	Medium
Start a weekly newsletter (“Monday Lion Mail”)	High	Medium
Repurpose BB3 TV videos into 2 YouTube Shorts + 2 Reels per week	High	High
Run brand-defense Google Ads + \$5/day Meta retargeting to lead magnet	Medium	Low
Pitch 3 podcasts per month; track backlinks won	High	Medium
Full accessibility sweep (axe + WAVE); fix top 20 issues	Medium	Medium
Quarterly SEO review: rankings, CWV, conversion rate, list growth	High	Low

Summary: billybeck.com is a premium brand on a tired foundation. The authority and social proof assets are already in place — most of the growth unlock is technical housekeeping and one well-designed funnel. Ship the Week 1–2 list first; you'll feel the difference in traffic and form fills within 30–45 days.

Methodology note: this audit is based on a review of the live HTML returned from billybeck.com (home, about, testimonials, blog, coaching index, videos). We did not have shell access to the server, PageSpeed API, or Search Console, so performance numbers are estimated from the observed markup. A follow-up pass with full tool access will tighten the numbers.
